

GENERAL STANDARD INFORMATION FOR EVENTS.

This document should address all of your questions and provide an overview of what to expect of a visit from Starr's Planetarium.

Starr's Planetarium has the most advanced 360° immersive travelling projection system. Groundbreaking technology in our mobile planetarium has been inspiring and entertaining since 2005 and tens of thousands of people have enjoyed this amazing and fun way to learn about Space & Astronomy.

We offer the largest choice of digital planetarium (fulldome) movies in Australia, and our presenter-led astronomy shows are delivered by engaging and experienced science communicators.

The dome provides a theatre setting for 360° immersive digital images with surround sound that is totally interactive. Combining animation with real time imagery audiences will be immersed in a stunning 360° movie, take a trip through the Solar System and onwards to the very edge of our Galaxy, and then come back down to Earth to find out what's in the sky tonight.

We are proud members of the NASA Museum Alliance. Our content is sourced from NASA and world-leading Space & Astronomy content providers.

Our displays are suitable for all ages.
We also cater for special needs and all of our domes are wheelchair accessible.

We also offer the capability of showing 360° and standard content provided by the customer

Please note the planetarium is for **indoor** use only.

Our standard system requires a large room, library or hall with a clear space of 6 metres by 7 metres and a height of 3.1m. The only other thing we need is a 240v power point. This is set up to manage between 20 and 35 people.

Our Superdome requires 10m x 9m with a clear height of 4.1m. This is suitable for larger spaces. We can accommodate up to 75 people in the superdome but generally restrict numbers to around 50/60 to ensure the comfort of adults accompanying children.

Setting up times are 60 - 90 minutes depending on the size of the dome and access to the staging area..

Our full Planetarium show includes;

- * A presenter-led Solar System & Galaxy fly-through.
- * A presenter-led 'What's in the sky tonight' display.
- * A choice of one of our 360° movies.

Each session can be run for approximately 20 - 60 minutes including time to allow for the changeover of the audience. Sessions and content can be modified to fit in with your timetable and needs. Our displays are suitable for all ages from kindy up to adult and are customised to suit the audience and requirements.

Our presentations are always very well received wherever we visit and I am sure you will be amazed at the ease, quality and value of our Space experience. Please check out our Google reviews and the Testimonials page on our website to read what others have to say.

Our rates vary depending on audience size, location and time hired. I can supply a written quote on request.

If required I can send you through copies of our Public Liability insurance as well as Working With Children Police checks and our Risk Assessment form.

If you need any further information please do not hesitate to get back in touch by phone or by email.
